

GOT ASH TREES?!

- * **The EMERALD ASH BORER Pest is in Wisconsin!**
You are located within an EAB quarantined county!
- * EAB is an invasive, wood boring, metallic green beetle that feeds on ash trees and kills them.
- * There are over 770 million ash trees in Wisconsin. The City of Milwaukee is treating 32,000 ash trees located on city property with *TREE-äge*.
- * ***EAB is fatal to native ash trees.***
- * During the first year of infestation there are no visible signs of the EAB, making it difficult to detect which is a good reason to apply preventative treatments now.
- * **The cost of the preventative treatment is minimal compared to removing the tree and replanting.**

Don't Let THIS Happen Here!

The EAB has killed tens of millions of ash trees since it was discovered in Michigan in 2002. The outbreak now ranges from Maryland to Missouri.

Tree A

Tree B

A Tree Story: Two healthy ash trees were threatened by the Emerald Ash Borer. **Tree A was left untreated and died. Tree B was treated with the Arborjet system and continues to thrive.** Once a beautiful component of the landscape, Tree A is now an expensive removal.

Affordable Tree Care, LLC offers **preventative** treatment to protect your ash trees. Michigan State University Research studies show *TREE-äge* injections are nearly 100% effective on infestations. Each injection lasts 2 years and is applied using a "closed system" with no spraying or applying pesticides into the soil. **Affordable Tree Care** directly applies a controlled dose into the tree's vascular system assuring rapid results. Studies show *TREE-äge* to last longer and be more effective than any other EAB treatment available.

Let us help you protect your Ash Trees!

Call us about using TREE-äge® Insecticide to protect your tree from Emerald Ash Borer.

- **Fast Acting:** Formulation is injected directly into the tree's transport system and is quickly distributed throughout the tree
- **Effective:** Proven by university trials
- **Environmentally Responsible:** Treatment is sealed in the tree
- **Long Lasting:** Treatment with TREE-äge provides up to two years of protection from EAB

Arborjet products are used by the USDA Forest Service and city foresters in Chicago, Milwaukee, and more.

TREE-äge EAB Control vs. Other Treatments

Imi+P: Imidacloprid + Pentra-Bark® (sprayed on the bark)

Imi: Imidacloprid (soil application)

Mauguet: Mauguet's Imicide® (injection caps)

Dino+P: Dinotefuran (Safari®) + Pentra-Bark® (sprayed on the bark)

Dino: Dinotefuran (Safari®) (soil application)

TREE-äge: Arborjet® Tree Injection

Published by McCullough, D.G. et al. (2007) in the USDA EAB Research & Development Review Meeting 2007. Treat trees only 4 inches or larger. Results are best when trees are preventively treated prior to an infestation.
